VI Schedule of Equipment.

Appendix: Departmental Cost Summary.

I. Scope

This Equipment Note gives guidance on the basic equipment requirements for an Out-Patient Department. It is intended to be read in conjunction with Hospital Building Note No. 12 which relates to the design and planning of an out-patient department at a non-teaching general hospital, but it does not include equipment for the operating theatre suite listed at sub-division (*b*) of the Hospital Building Note for which a separate Equipment Note will be issued.

II. General Considerations on the Use of Equipment Notes

Equipment Note No. 1 (Equipping a hospital building) provides an introduction to the series of departmental Equipment Notes, advice on their application and guidance on the task of preparing equipment schedules for individual building projects. This departmental Equipment Note is intended to be used within the general planning framework set out in Equipment Note No. 1 and in the manner described therein.

The following method of classifying equipment, which is explained in more detail in Hospital Equipment Note No. 1, is used throughout this Note.

The term "equipment" covers all items necessary for the functioning of the hospital and includes both non-technical (e.g. furniture) and technical equipment. Short-term consumable supplies such as fuel, stationery, food, drugs and dressings are not included.

Equipment is classified into three groups:

Group I: items usually supplied and fixed by the contractor for the works.

Group II: items having a permanent or semi-permanent location and having a significant effect on space and/or structural requirements:

(*a*) those supplied by the hospital authority and fixed by the contractor for the works;

(*b*) those supplied by the hospital authority and put in position by them or on their instructions outside the general construction contract.

Group III: smaller items, usually storage items, supplied and put in position by the hospital authority.

III. Special Considerations in Respect of this Note

The equipment detailed in this Note is regarded as suitable for the out-patient department described in Building Note No. 12 (with the exception of the operating theatre) and has been listed in room (or space) sequence conforming to that Building Note. The tables in the Appendix to the Building Note list the type and number of rooms required for schemes of varying size and these examples have been used as a basis for the preparation of this Equipment Note.

Since the type of consulting suite will vary to meet local requirements the Equipment Note lists the items of equipment required for each type of consulting suite, viz., Type A comprising two combined consulting-examination rooms; and Type B comprising one consulting room and two examination rooms. Separate cost totals are given in the departmental cost summary at the Appendix to this Note for both Type A and Type B consulting facilities to conform to the sizes mentioned in the Appendix to Building Note No. 12.

Some fixed items of equipment (Group I) have already been mentioned (and costed) in the Building Note, but it has been thought useful to include them again in the Equipment Note which represents the results of a comprehensive review. Reference should, however, be made to the Building Note—Part V, Engineering Services—for further information on the mechanical services and electrical installations. Structural elements, floor coverings, non-specialised heating and lighting fittings and similar items which are basic to any building are not included in the Equipment Note; neither are window blinds and window curtain tracks since the requirements may vary with local circumstances.

Throughout the schedule, for the sake of uniformity, towel dispensers are associated with disposal bins for paper towels. Suitable adjustments will need to be made where linen towels are to be used.

IV. Cost

Guidance on the cost of equipping out-patient departments to the standard shown in this schedule is given against the list of equipment for each room, both for the basic list of requirements and for certain additional items. Departmental cost summaries are shown in the Appendix to the Note. In using these cost figures, the considerations referred to in Section IV of Equipment Note No. 1 should be borne in mind.

The cost figures in this schedule and in the Appendix are related only to Group II and Group III equipment. As a matter of convenience Group I items of a specialised nature are listed in the room schedules, but these have already been taken into account in the cost allowance for construction (including engineering) in the appropriate Cost Note in Appendix E to Hospital Building Note No. 2.

(*a*) CONSULTING FACILITIES (continued)

DEPARTMENTAL ITEMS

Generally, items are shown throughout the lists in the rooms where they will normally be found in the department. In addition, the items set out below relate to the consulting facilities as a whole, listed under (*a*) Linen, (*b*) General items and (*c*) Central Sterile Supply Department items.

The items under (*a*) will probably be supplied from the Central Linen service and the quantities shown (and cost) are intended to give guidance on the requirements of consulting facilities providing 4, 8, 12 or 16 Consulting suites, but the total quantities held in the Central Linen Department will depend on various factors.

The items listed under (*c*) will be obtained from the Central Sterile Supply Department. Therefore an assessment of the basic requirements (and cost) for consulting facilities on the scale provided in this Equipment Note has not been made, but quantities will be shown in the Equipment Note for a C.S.S.D. in due course. The list is intended to give an indication of the type and variety of items which it has been assumed will be obtained from the C.S.S.D. The cost of these items will also be included under the C.S.S.D.

DEPARTMENTAL ITEMS

Generally, items are shown throughout the lists in the rooms where they will normally be found in the department. In addition, the items set out below relate to the Day Ward as a whole, listed under (*a*) Linen, (*b*) General items, and (*c*) Central Sterile Supply Department items.

The items under (*a*) will probably be supplied from the Central Linen services and the quantities shown (and cost) are intended to give guidance on the requirements of a Day Ward, but the total quantities held in the Central Linen Department will depend on various factors.

The items listed under (*c*) will be obtained from the Central Sterile Supply Department. Therefore an assessment of the basic requirements (and cost) for a Day Ward has not been made, but quantities will be shown in the Equipment Note for a C.S.S.D. in due course. The list is intended to give an indication of the type and variety of items which it has been assumed will be obtained from the C.S.S.D. The cost of these will also be included under the C.S.S.D.
